Presentation Guidelines – Research Paper / Algorithm Project

Course: Computer Security
Professor: Dr. Kirti Seth
Total Marks (Presentation): 5

1. Mode of Presentation

As part of the project evaluation, each student (or group) is required to prepare and submit a recorded video presentation. This presentation is intended to assess the student's conceptual understanding, analytical ability, and communication skills.

The video presentation must have duration of 3 to 5 minutes. Students are expected to ensure that the presentation is concise yet comprehensive, covering all essential aspects of their selected research paper or algorithm.

It is mandatory that the student's face remains visible throughout the presentation, along with a clear display of the presentation slides (PowerPoint or PDF). This requirement ensures authenticity and enables effective evaluation of individual contribution and understanding.

2. Submission Guidelines

The final video presentation must be submitted through the eClass platform.

- Submission Deadline: 10 May 2026
- Students must upload either:
    - The video file, or
    - A working link (e.g., Google Drive) with proper access permissions

Students are advised to verify the accessibility and quality of their uploaded content prior to submission.

3. Structure of the Presentation

The presentation must follow a **clear academic structure**, reflecting a systematic understanding and critical evaluation of the selected research work.

3.1 Introduction

Provide a brief overview of the research domain and contextual background. This section should introduce the topic and set the stage for the discussion.

3.2 Problem Statement

Clearly define the problem addressed in the research. Students should highlight:

- The relevance of the problem in the cyber-security domain

3.3 Motivation and Significance (Explain the importance of the research problem)

3.4 Methodology / Algorithm Description

Describe the approach adopted in the research work. This should include:

- The overall framework or model
- Algorithm or technique used

3.5 Key Concepts and Technical Approach

3.6 Results and Performance Evaluation (Present the outcomes of the research)

3.7 Advantages and Limitations

3.8 Critical Review (Independent Analysis)

This is a crucial component of the presentation. Students are expected to:

- Critically analyze the effectiveness of the method
- Identify possible improvements
- Highlight missing elements or limitations
- Compare with alternative approaches
- Suggest future research directions

3.9 Conclusion

Summarize the key findings and learning outcomes derived from the study.

4. Presentation Quality and Communication

Students are expected to maintain a **professional and academic tone** throughout the presentation. The following aspects will be considered:

- Clarity and coherence of explanation
- Logical flow of content
- Appropriate use of technical terminology
- Confidence and articulation
- Avoidance of direct reading from slides

Slides should be well-organized, visually clear, and free from excessive text. The use of diagrams, flowcharts, and graphs is encouraged to enhance understanding.
