## Quiz -2

Course Name: Object Oriented Programming – 1

Group: 002\_\_ Student ID :U\_\_\_\_\_ NAME :\_\_\_\_\_

Write the correct answer in the table given below.

| Q #    | 1             | 2 | 3        | 4                                   | 5                                           | 6     | 7    | 8    | 9    | 10   |
|--------|---------------|---|----------|-------------------------------------|---------------------------------------------|-------|------|------|------|------|
| Answer | Infinite Loop | 2 | 10<br>10 | 2 7<br>4 9<br>6 11<br>8 13<br>10 15 | Error:<br>Arguments<br>should be<br>pointer | FALSE | TRUE | TRUE | TRUE | TRUE |

|                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Find the output of following                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                       |

State True or False

- The variables commonly used in C++ functions are available to all functions.
- The same variable name can be used in different functions without any conflict.
- A function may contain more than one return statement.
- A function can still be useful even if you do not pass any arguments to it and the function does not return any value back.
- A two dimensional array is nothing but an array of one dimensional array.
