

Individual Assignment 3

Dr. Sarvar Abdullaev
s.abdullaev@inha.uz

March 24, 2023

You should complete given exercises and submit them in a single zip file named as your student ID (e.g. u210023.zip) to eClass before the deadline.

Your completed assignments will not be graded, but will be marked for completion. The maximum mark for completing all assignments in this semester is 10 points.

1 Creative Thinking

You should express how creative and original your thinking can be by completing following tasks. We encourage you to go as far as possible in your imagination and think outside the box. Don't criticise your ideas and even though they look silly. Remember, quantity is more important than quality in this process.

1.1 Favourite Movies

Write the basic plot of your 5 favourite movies using only emojis. You can find emojis [here](#) or [here](#). Write movie titles at the end of this homework for my reference.

1.2 Caption AI Art

Write captions for each picture generated by a Make-A-Scene algorithm which can convert text descriptions into pictures based on given scene. You can learn more about it from [this article](#).

1.3 SCAMPER the stapler

Assume that your challenge is to think of ways to improve an office stapler. Here are some sample ideas for SCAMPER questions. Of course, you are free to provide your own answers to these questions. You should draw a visual sketch for any of these ideas. Note, the more concepts you create, the better.

- *Substitute*: Design a stapler that can staple with a thread.
- *Combine*: Design a combination stapler and magnetic paper clip dispenser
- *Adapt*: Design a stapler for stitching banana skin
- *Magnify*: Enlarge the stapler's top and make it ergonomic to fit a hand
- *Put to another use*: Design a stapler that can be used as pliers or scissors.
- *Eliminate*: Design a stapler that staples without staples.
- *Reverse*: Design a stapler that works by pulling up on a handle instead of pressing down.

2 Mind-benders

2.1 Numbers Graph

Insert the numbers listed into the circles so that – for any particular circle – the sum of the numbers in the circles connected to it equals the value corresponding to that circled number in the list. For example:

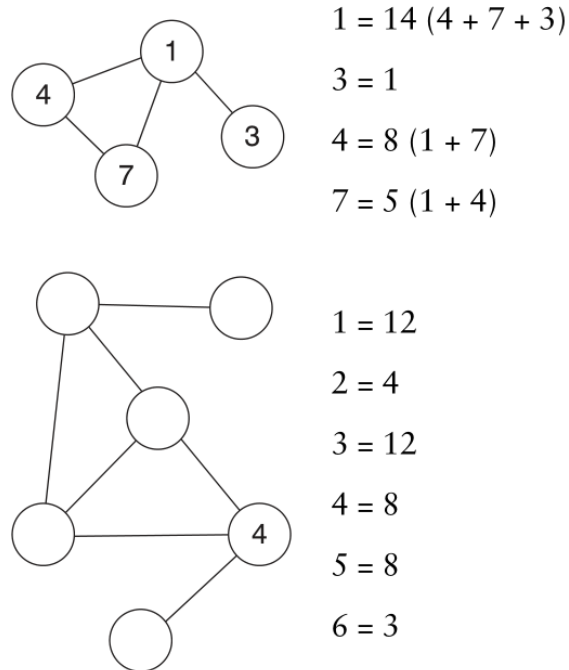

Figure 3: Graph

2.2 White Circles

Place four white circles correctly in the grid in accordance with the rules of logic already established.

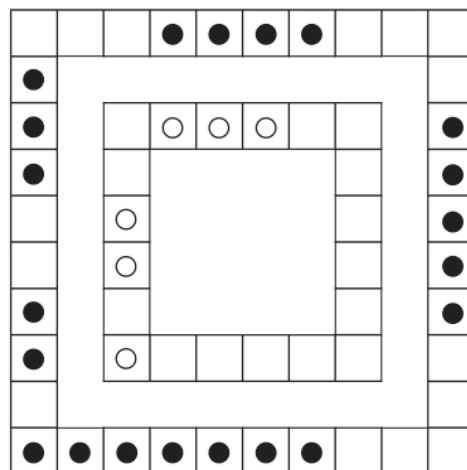

Figure 4: White Circles

2.3 Five Squares

Here are three squares made from twelve matches. How can you move just three matches to create five squares?

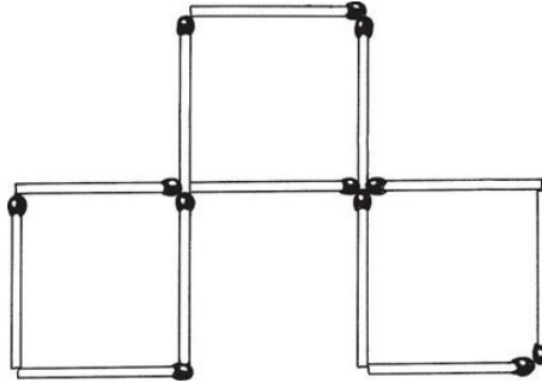

Figure 5: Squares
