

Object Oriented Programming 2

Practice Assignment

“ASIAN UNIVERSITY” in Tashkent is planning to automate its library system by automating day to day operations with the help of a software application. You are asked to prepare a module for this project by considering the following guidelines:

Create a class **Books** which have following attributes book_name and book_price. It has a default constructor.

Create a class **Magazine** which have attributes publication_month and number_of_pages.it also contains a static variable number_of_copies which keep tracks of number of Magazine object created.It also contains one object of book class as its member(composition)

Magazine class has following functions:

SetDetails()- It takes input from user for attributes of Magazine and Books.

List_Magazine()-display all details of magazine.

Book_issued()- This function is declared as friend to class Magazine. It displays the number of magazine issued. It also checks that number of magazines issued will be less than equal to number_of_copies.

Write C++ code to develop an application that can handle the following task:

Display the details of any magazine

Count the number of magazine issued.
