FALL – 2024 (Final Examination)

COURSE NAME:

Software Engineering

COURSE NUMBER:

CSE4070

EXAMINATION DATE:

TIME:

EXAMINATION DURATION:

60 minutes

ADDITIONAL MATERIALS
ALLOWED TO USE:

Not allowed.

SPECIAL INSTRUCTIONS:

All questions compulsory.
Total Marks 25

Please do not open the examination paper until directed to do so.

READ INSTRUCTIONS FIRST:

Desks should be free from all unnecessary items (books, notes, technology, food, water, clothes)

Use of any electronic device (Phone, iPod, iPad, laptop) is not allowed during the examination.

Cheating, talking to fellow students, singing, turning back are not allowed

Write your Name (*capital letters*), ID number and Section number in each page of your examination paper.

Final answers must be written by **only blue or black, non-erasable pen**. Do not use highlighters or correction pen.

All answers should be written in the space provided for each question, unless specified the other way.

You should choose one answer in the multiple-choice question.

SECTION NUMBER IN THIS COURSE:

7. Why is Partitioned Architecture used in software development?

Section B - Case Study (11 Marks)

Case Study: Restaurant Management System (RMS)

Delicious Bites, a growing restaurant, is seeking to improve customer experience and simplify operations through a new Restaurant Management System (RMS). This system will focus on efficiently managing table reservations, food orders, and billing processes.

The restaurant aims to make table bookings seamless for customers. Using the RMS, customers can book tables online or over the phone, providing details such as the number of guests, date, and time. Each booking will receive a unique ID, allowing staff to track, update, or cancel reservations with ease.

For order management, the RMS will maintain a digital menu with detailed information, including dish names, descriptions, prices, and preparation times. Customers can place orders via servers or self-service kiosks, and the kitchen staff will receive these orders in real-time, ensuring accuracy and timely preparation.

Billing processes will be streamlined through an integrated payment system that supports cash, cards, and digital wallets. The RMS will automatically generate detailed bills, breaking down item charges, taxes, and any applicable discounts. This automation will enhance efficiency and reduce errors during peak hours.

Additionally, the RMS will include analytics features that provide insights such as identifying best-selling dishes, understanding peak customer hours, and tracking customer feedback. These insights will enable the restaurant to make informed decisions for improving operations.

STUDENT NAME:

STUDENT ID NUMBER:

SECTION NUMBER IN THIS COURSE:

1. Identify the functional requirements outlined in the given case study. (2 Marks)
2. Create a class diagram encompassing entity, boundary, and controller classes, outlining their attributes, methods, and the relationships among these classes. (6 Marks)

Instructions:

- a. Use proper naming conventions for classes, attributes, and methods. (2 Marks)
- b. Create a clean and organized diagram with clear notations. (1 Marks)
